LID National Design Manual 1999

“Centralized versus Decentralized Controls”

How LID Began!

1200 Years and Still Working !!!

Buttermilk off North Shore

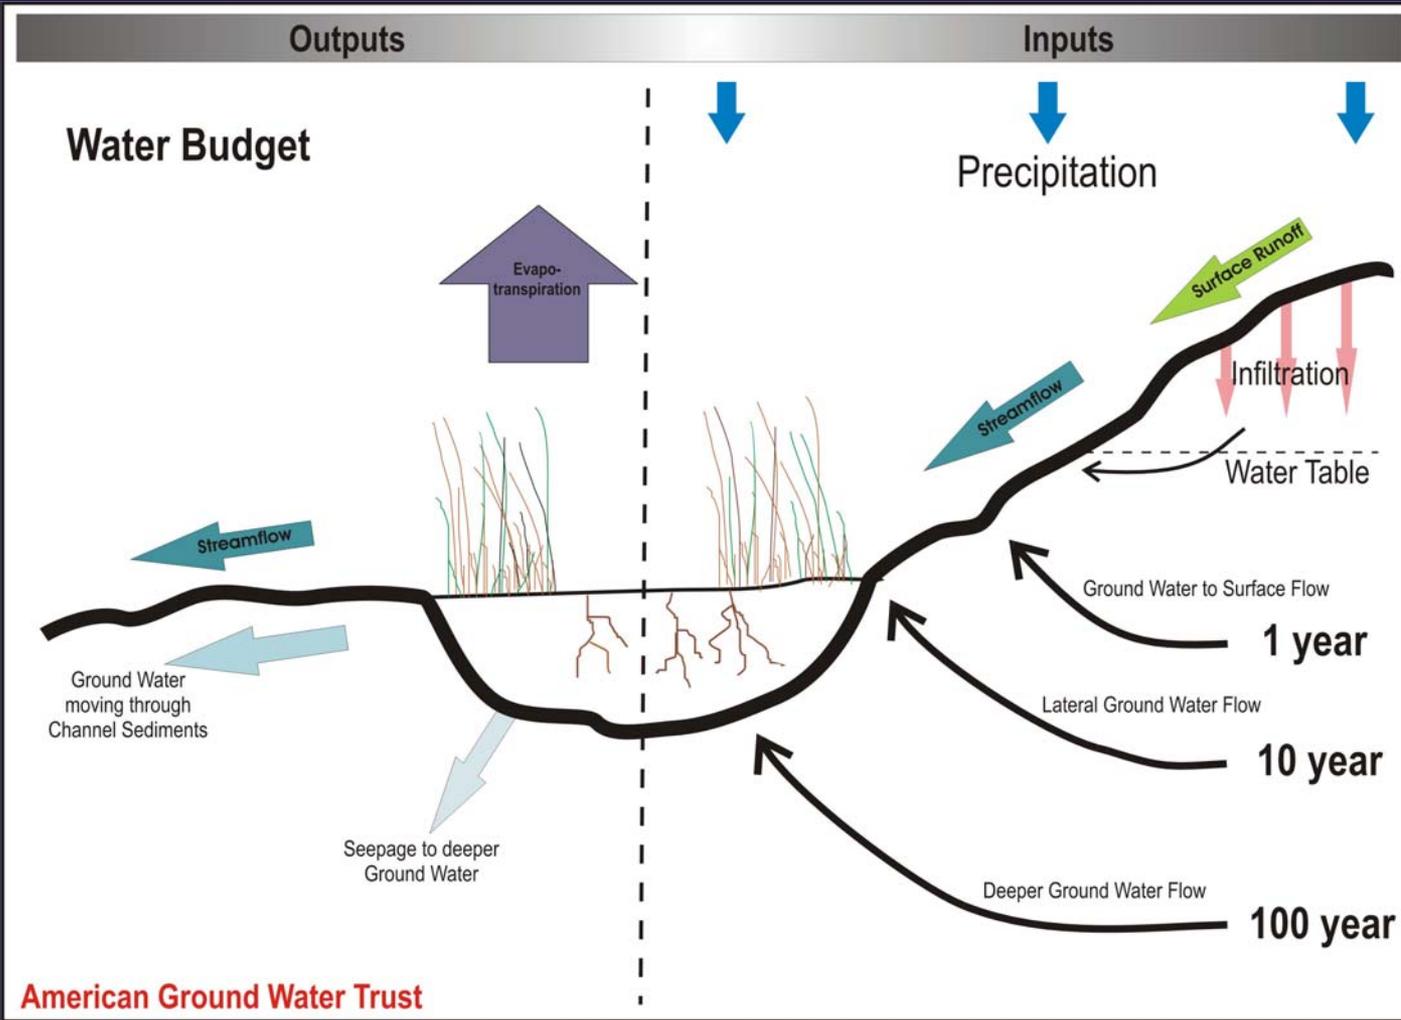

Buttermilk off Ring Road

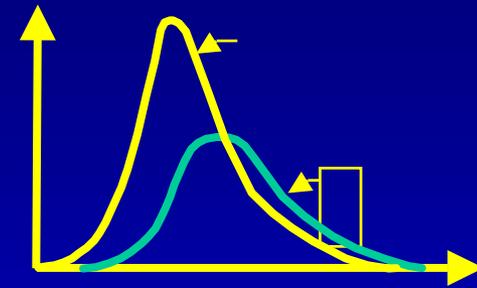

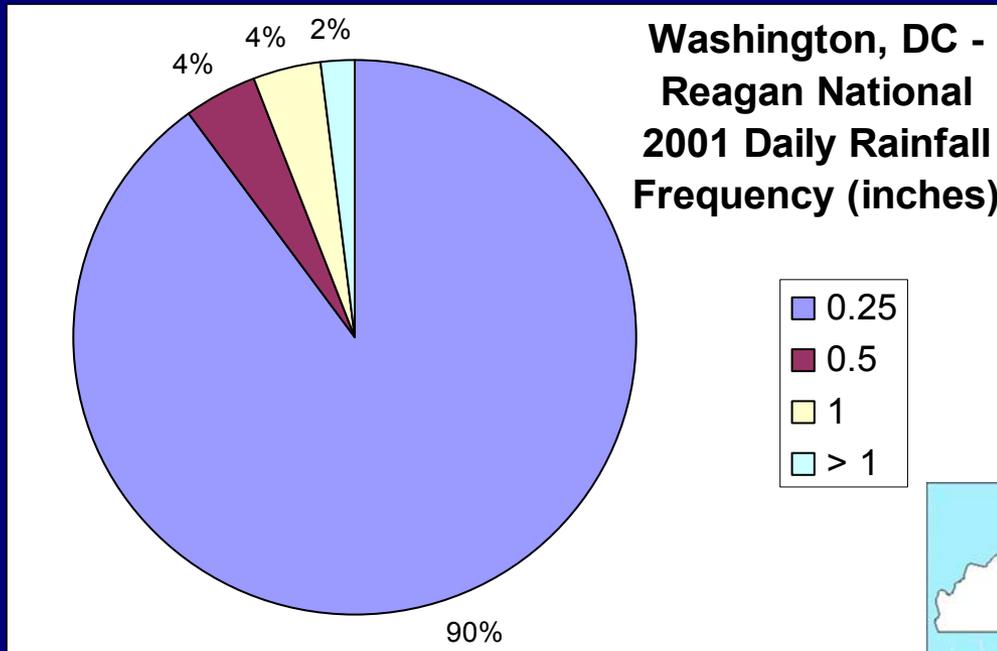

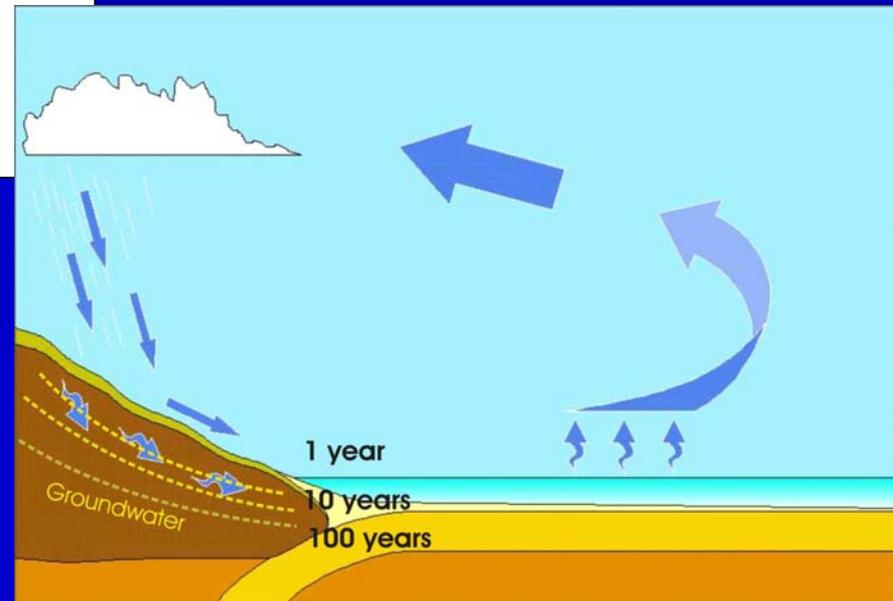

Compliance
by Working
with Natural
Processes

Address Frequently Occurring Events and Loads While Insuring Flood Protection

LID – Examples of Where and Who

Where

- Chesapeake Bay Watershed
- Great Lakes States
- Puget Sound
- Oregon
- New England
- Florida
- Minnesota
- Pennsylvania
- New Jersey
- Delaware
- North Carolina
- New Zealand
- Australia

Who

- ASCE
- EPA
- NRDC
- NAHB
- Harvard Design School
- Universities
- Watershed Groups
 - Rappahannock
 - Upper Nuse
 - Chagrin
- Professional Groups
- Consultants
- DOT's
- U.S. Congress
- DOD

Why - LID

- Water Supply
- Wastewater
- Stormwater
 - Flood Control
 - Ecological Health
 - Human Use
 - Regulations

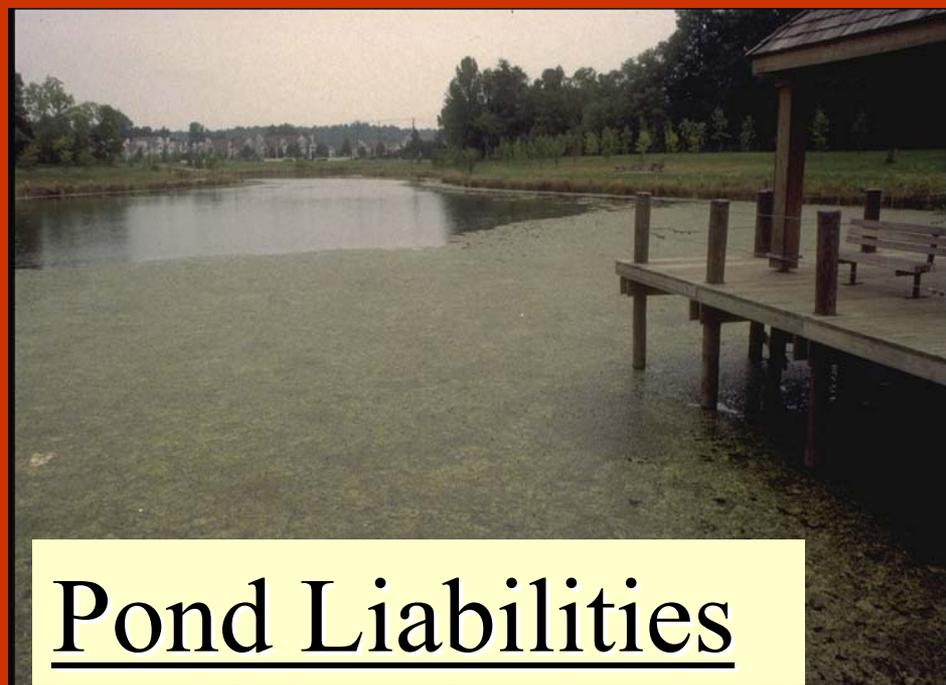

Important Concepts

- Terrestrial / aquatic ecosystem linkages
- Ecosystem functions
- Using nature to mitigate its own forces
- Mimic the water balance
- Hydrology as an organizing principle
- Multiple systems
- Volume / Frequency / Timing
- Ecological functions of the built environment

Limitations of Conventional Stormwater Approaches

- Economics
 - Cost of Maintaining a Growing / Aging Infrastructure
- New Objectives (Public Health / Ecological)
 - Source Water, CSO's, Living Resources / Streams
 - Regulations
 - NPDES / TMDL's / ESA

Maintenance

Pond Liabilities

Limitations

- Safety / Health
- Inspection / Maintenance
- Inefficient Pollutant Removal
- Temp / Sediment / Frequency / Volume

Safety

Issues

West Nile Virus

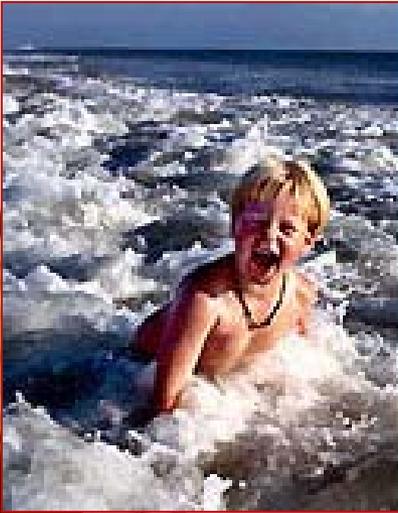

Safety

Maintenance

Sediments

Nutrients

Values / Functions / Goals

What is the
Role of
Technology?

Your understanding of the state of technology is key to:

- Setting Goals
- Prioritizing protection / restoration strategies
- Determining cost of protection programs
- Promoting / discouraging development

“Technology can be Apolitical”

Paradigm Shifts

- Watersheds to **Ecosystems**
- Flow Centric to **Volume Centric**
- Centralized Control to **Decentralized Control**
- Uni-functional to **Multifunctional**
- Impact Reduction to **Functional Restoration**
- Good Drainage to **Functional Drainage**
- One Size Fits All to **Unique Design**
- Unsustainable to **Sustainable**

Emerging Technology
Debate

The Efficacy of
Centralized
Versus

Decentralized Controls

CHAPTER 26 CFR - WATER POLLUTION PREVENTION AND CONTROL

SUBCHAPTER I - RESEARCH AND RELATED PROGRAMS

- § 1251. Congressional declaration of goals and policy.
(a) Restoration and maintenance of chemical, physical and biological integrity of Nation's waters; national goals for achievement of objective.

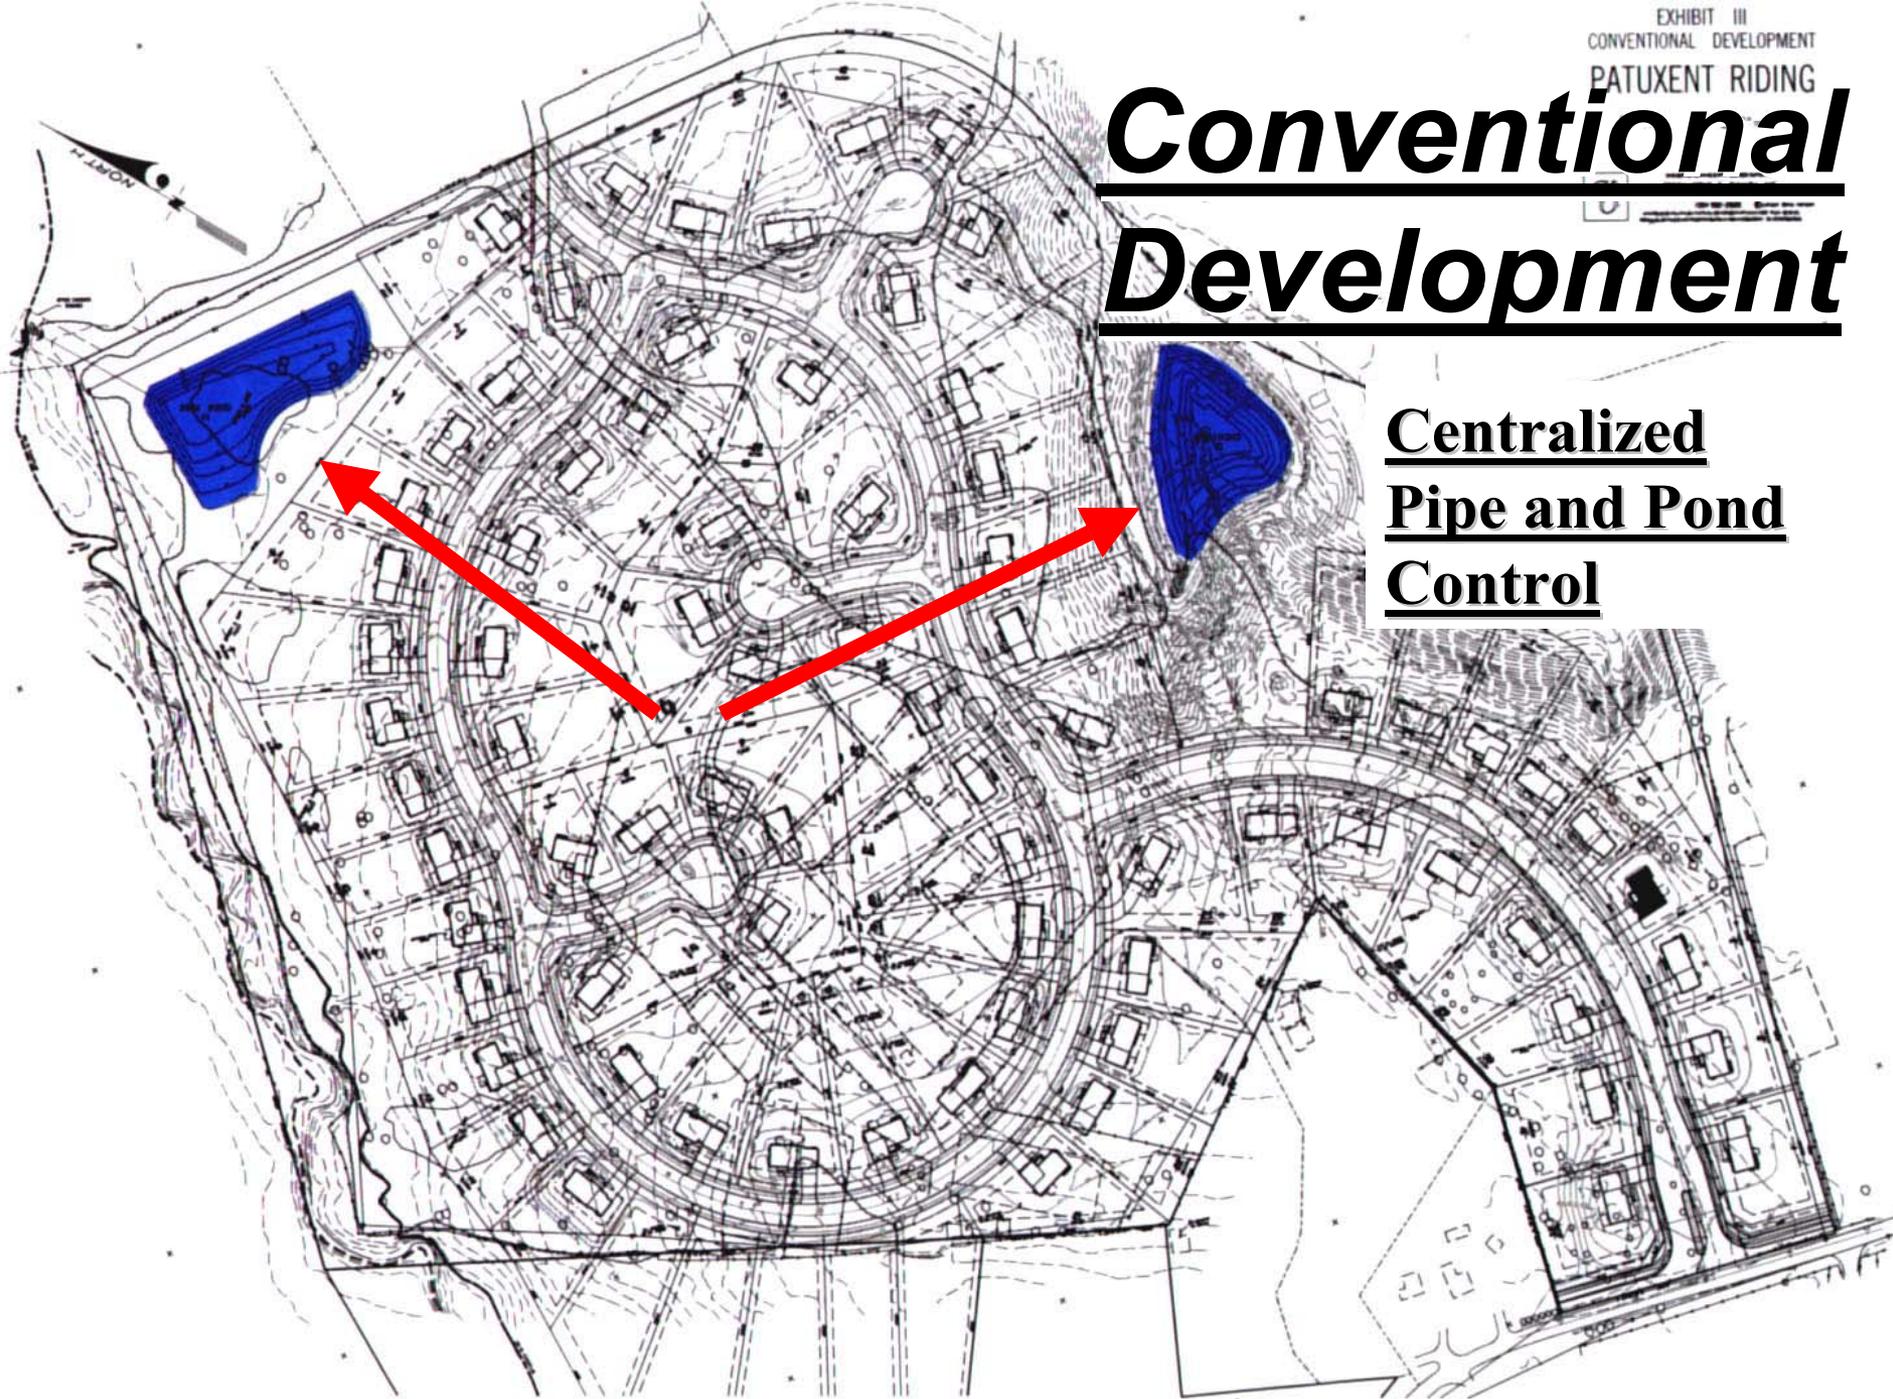

- Ecosystems Based
- Technology-forcing
- Comprehensive Research
- Total Maximum Daily Load

Limitations of Conventional Stormwater Approaches

- Technology Gaps
 - Cumulative impacts
 - Not an anti-degradation strategy
 - Allows hydrodynamic modifications
 - Allows continued stream degradation
 - Limited use for urban retrofit
 - Unsustainable maintenance burdens

Conventional Development

Centralized
Pipe and Pond
Control

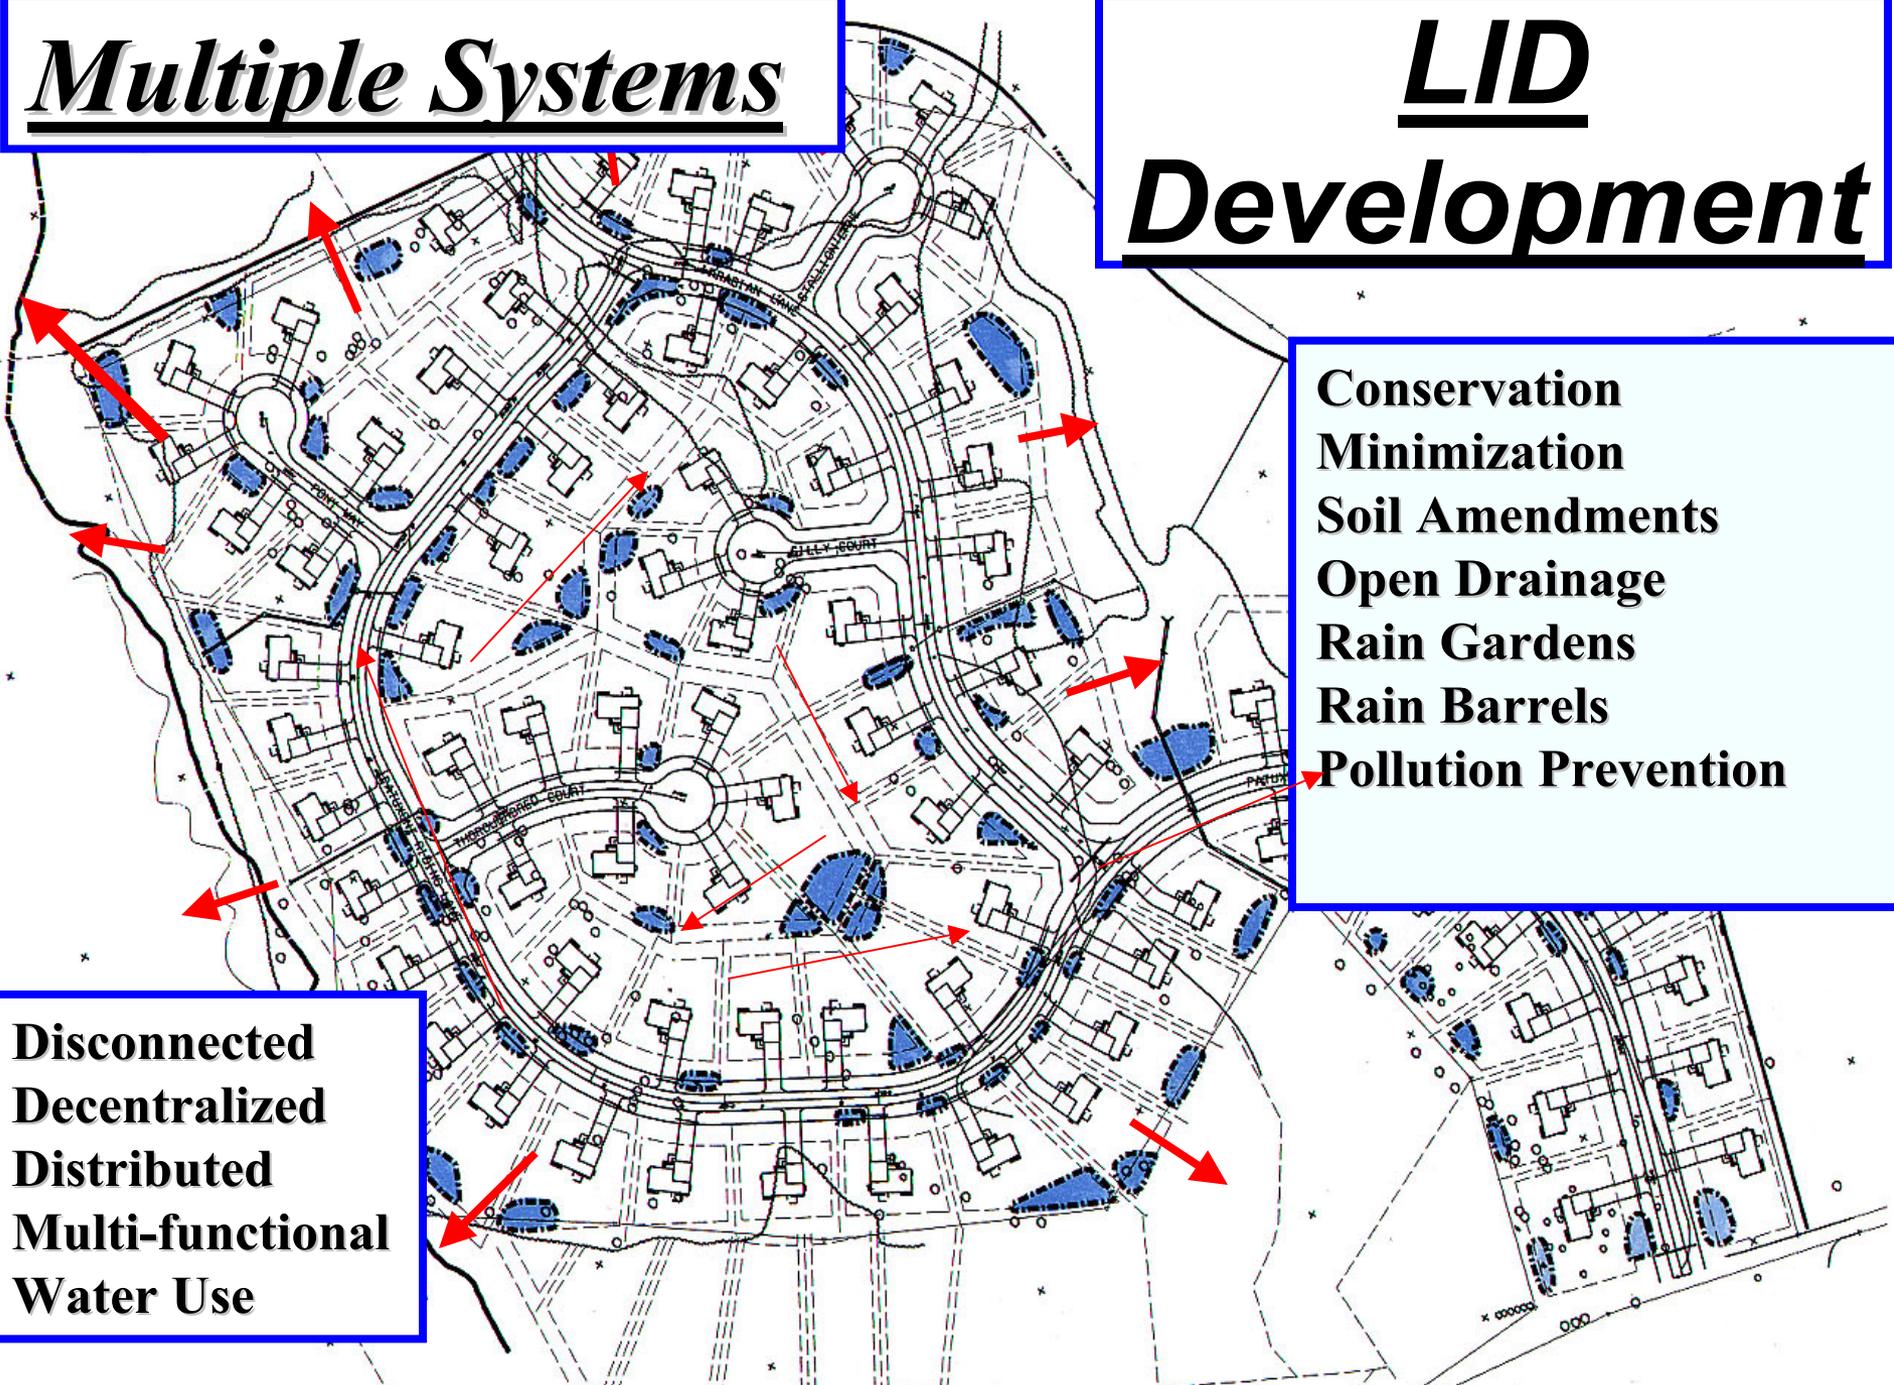

Multiple Systems

LID Development

Disconnected
Decentralized
Distributed
Multi-functional
Water Use

Conventional

Low Impact

Good Drainage

Functional Landscape Design

Ecosystem Protection

Protecting or restoring the natural function, structure, and species composition of an ecosystem, recognizing that all components are interrelated.

-- U.S. Fish and Wildlife Service

Applied ecology, science and engineering to ensure homeostasis between the terrestrial and aquatic ecosystems.

New Objectives

Small Stream and Living
Resource Protection

Ecological Integrity Protection

Species – Fauna / Flora

Structure – Spatial / Temp / Distribution

Processes – Cycling (Energy / Materials / Nutrients)

Minimize / lessen impacts

We should

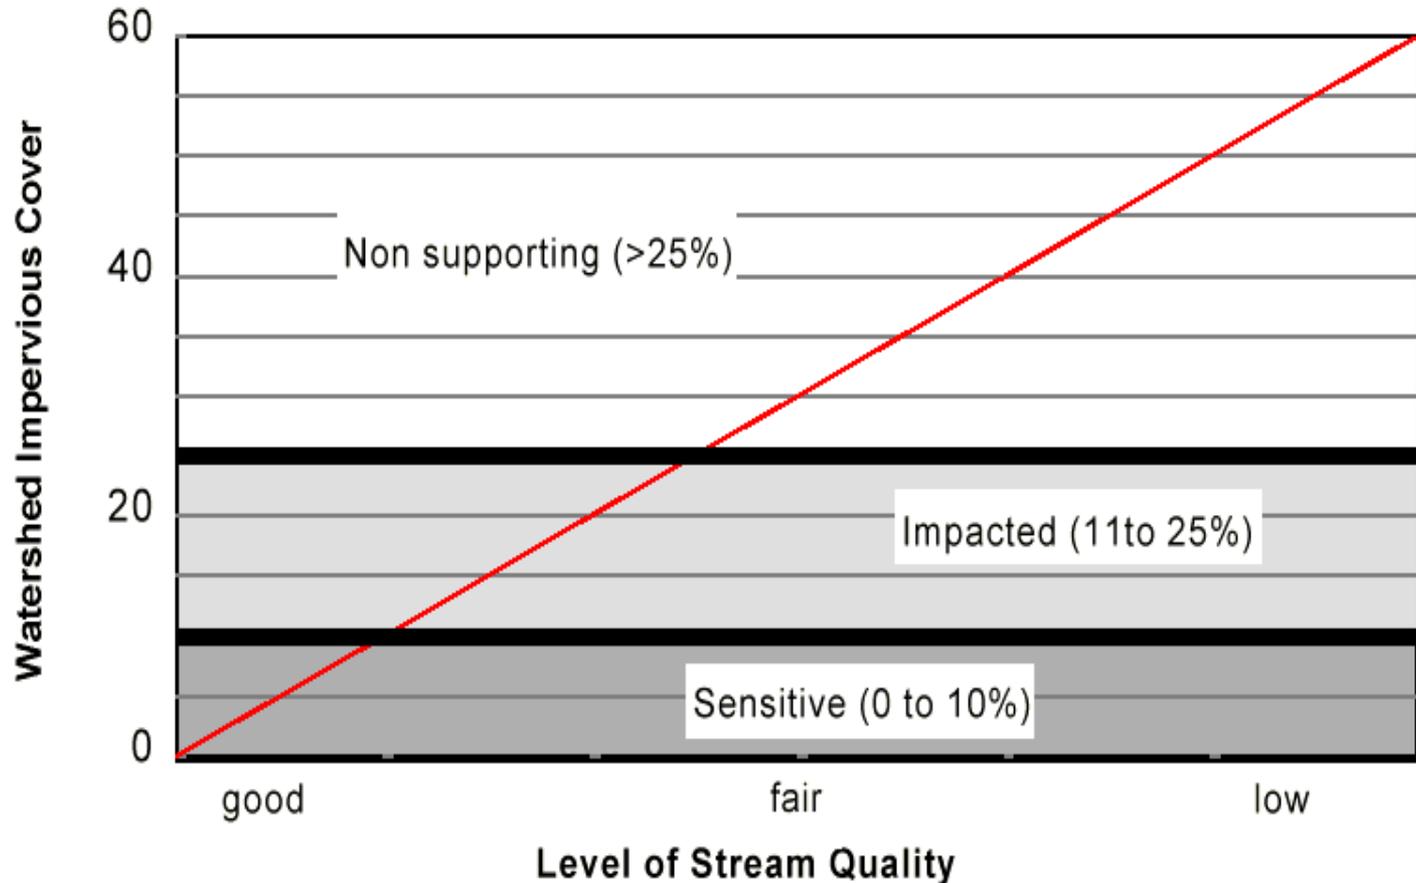

Restore / maintain functions

Ecological Factors

1. Hydrology / Hydraulics
2. Habitat Structure
3. Water Quality
4. Energy Sources
5. Biotic Interactions

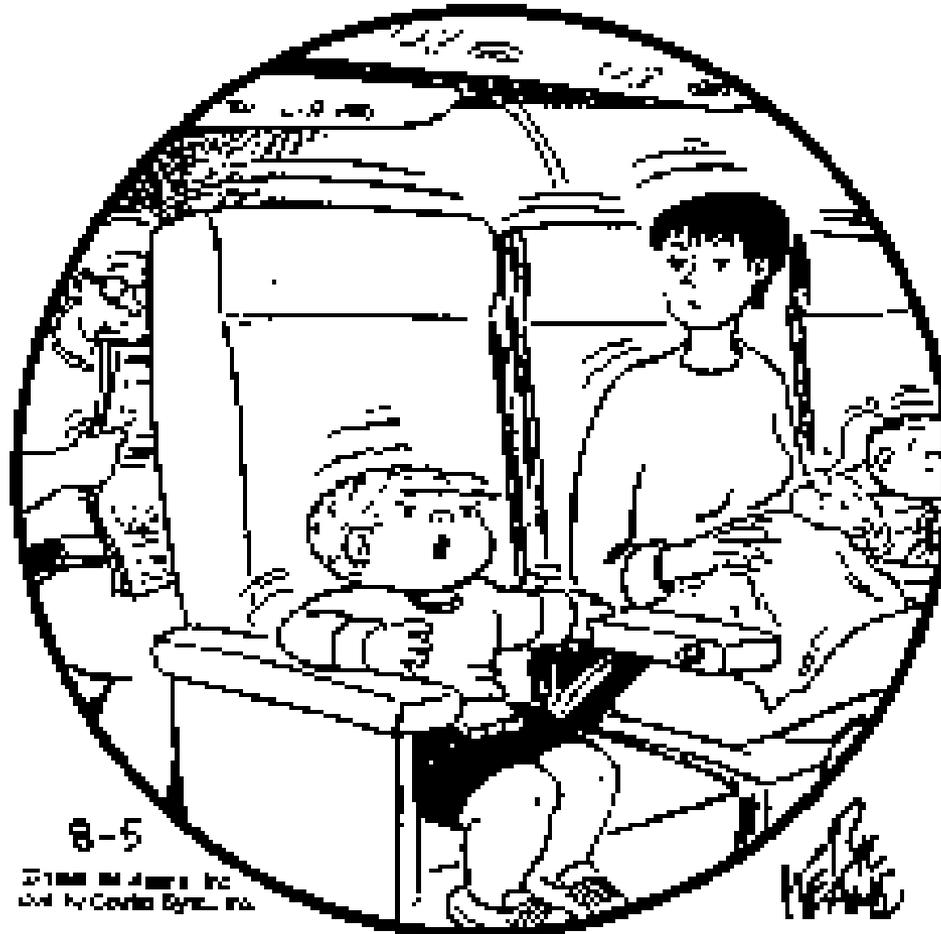

Imperviousness & Threshold Theories

It's not so simple - very complex!

Source: Schueler and Claytor, 1995

THE FAMILY CIRCUS

"I wish they didn't turn on that seatbelt sign so much! Every time they do, it gets bumpy."

Good Science or Good Sense?

Correlation or Causation

- Correlation "mutual relation between two or more things"
 - Most accidents take place within 25 miles of home.
 - Therefore it is more dangerous to drive near your home.
 - Failure of your main and reserve almost always results in death.
 - Therefore parachute failures cause death.
 - Increased imperviousness results in decreased biological integrity.
 - Therefore impervious surfaces causes stream impairment.
- Correlation is not necessarily causation.
- Faulty conclusions drawn from scientific research.

Good Science or Good Sense? “Correlation or Causation”

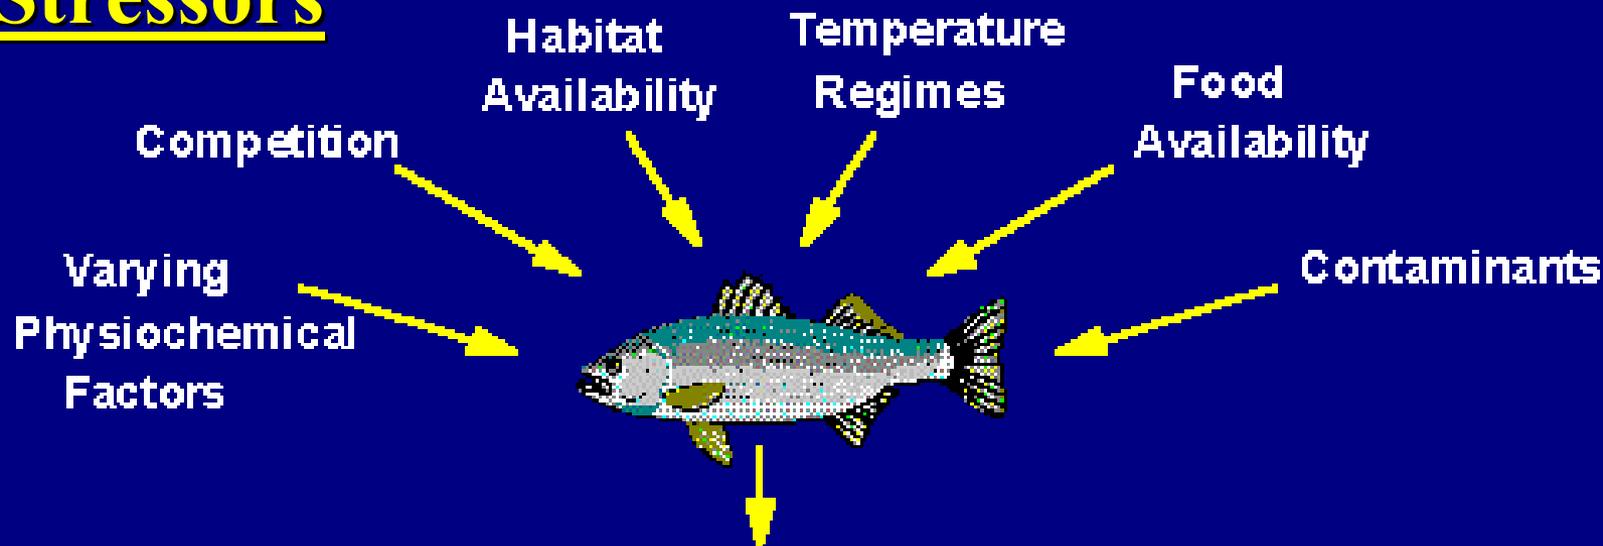

- Causation "causing or producing an effect"
- Confounding Problems
- What is the “Proximate Cause” of stream degradation in urban areas (or any disturbed land).

Causal Effects of Urbanization

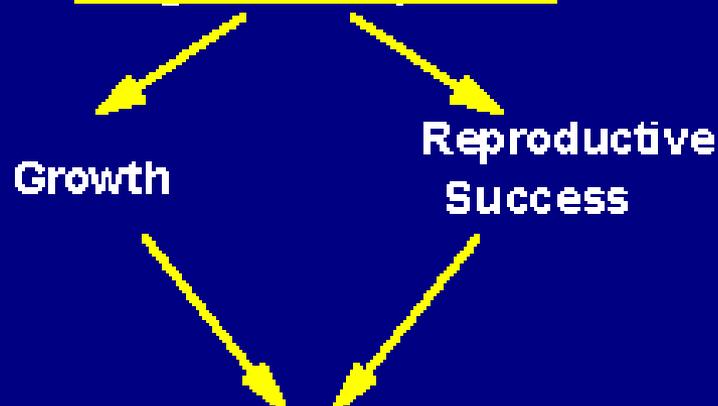

Changes in Ecosystem Functions such as:

Velocity / Frequency / Habitat Structure /
Nutrient Cycles / Chemistry / Energy /
Temperature / Base flow

Stressors

Integrated Responses

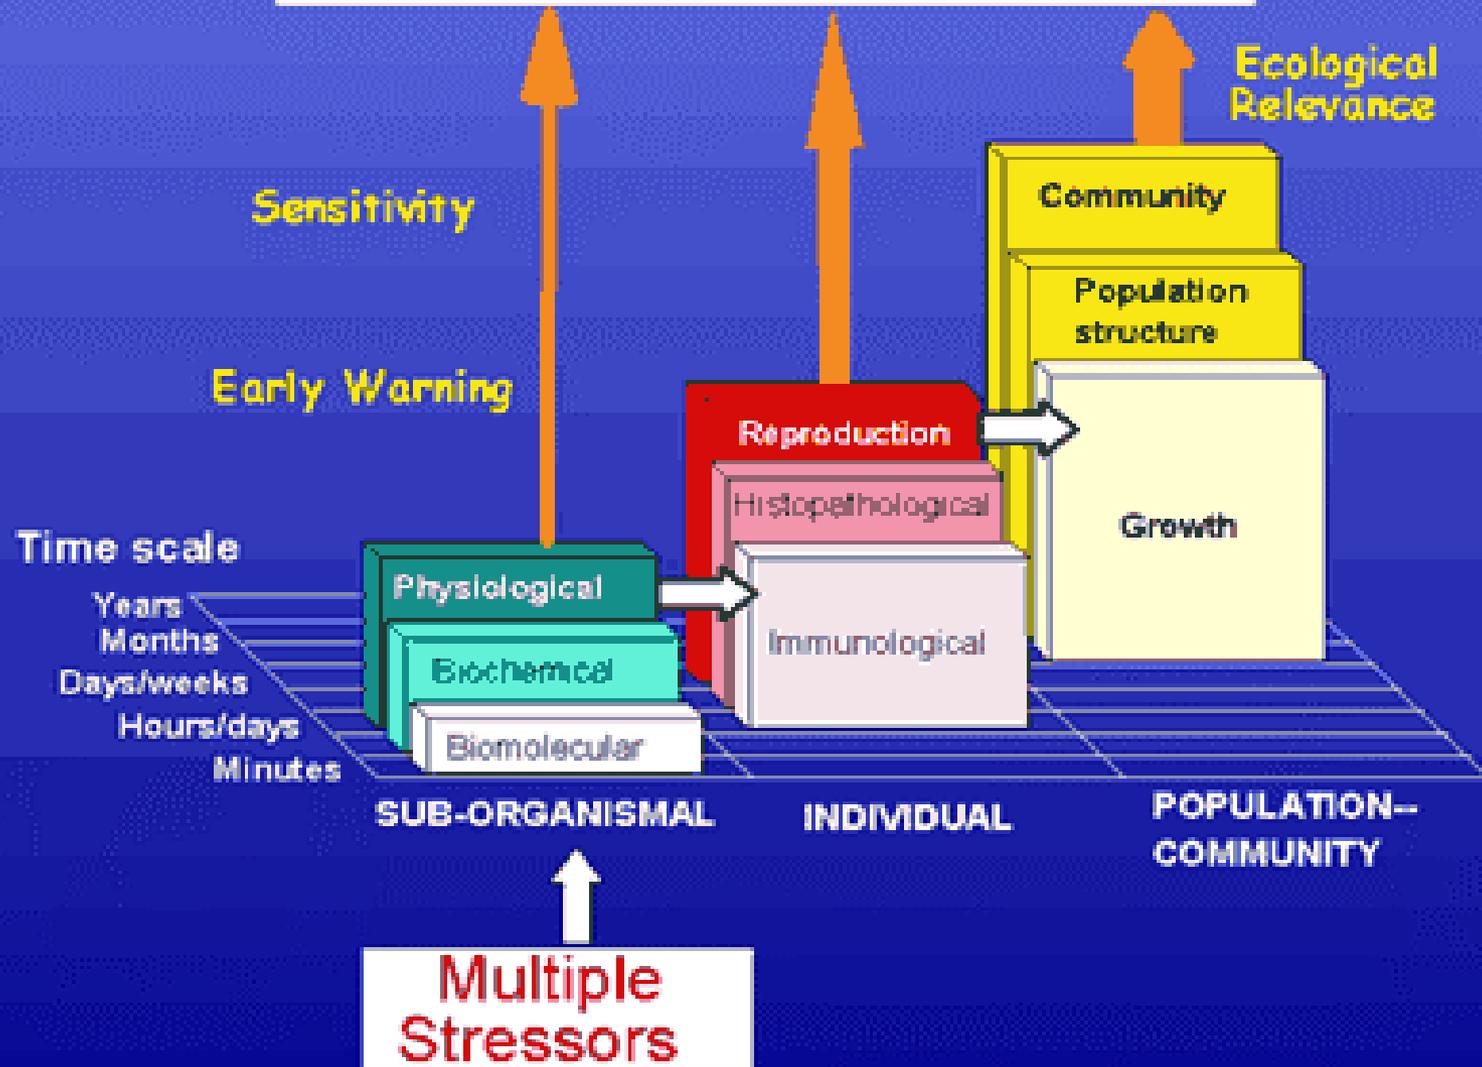

Response

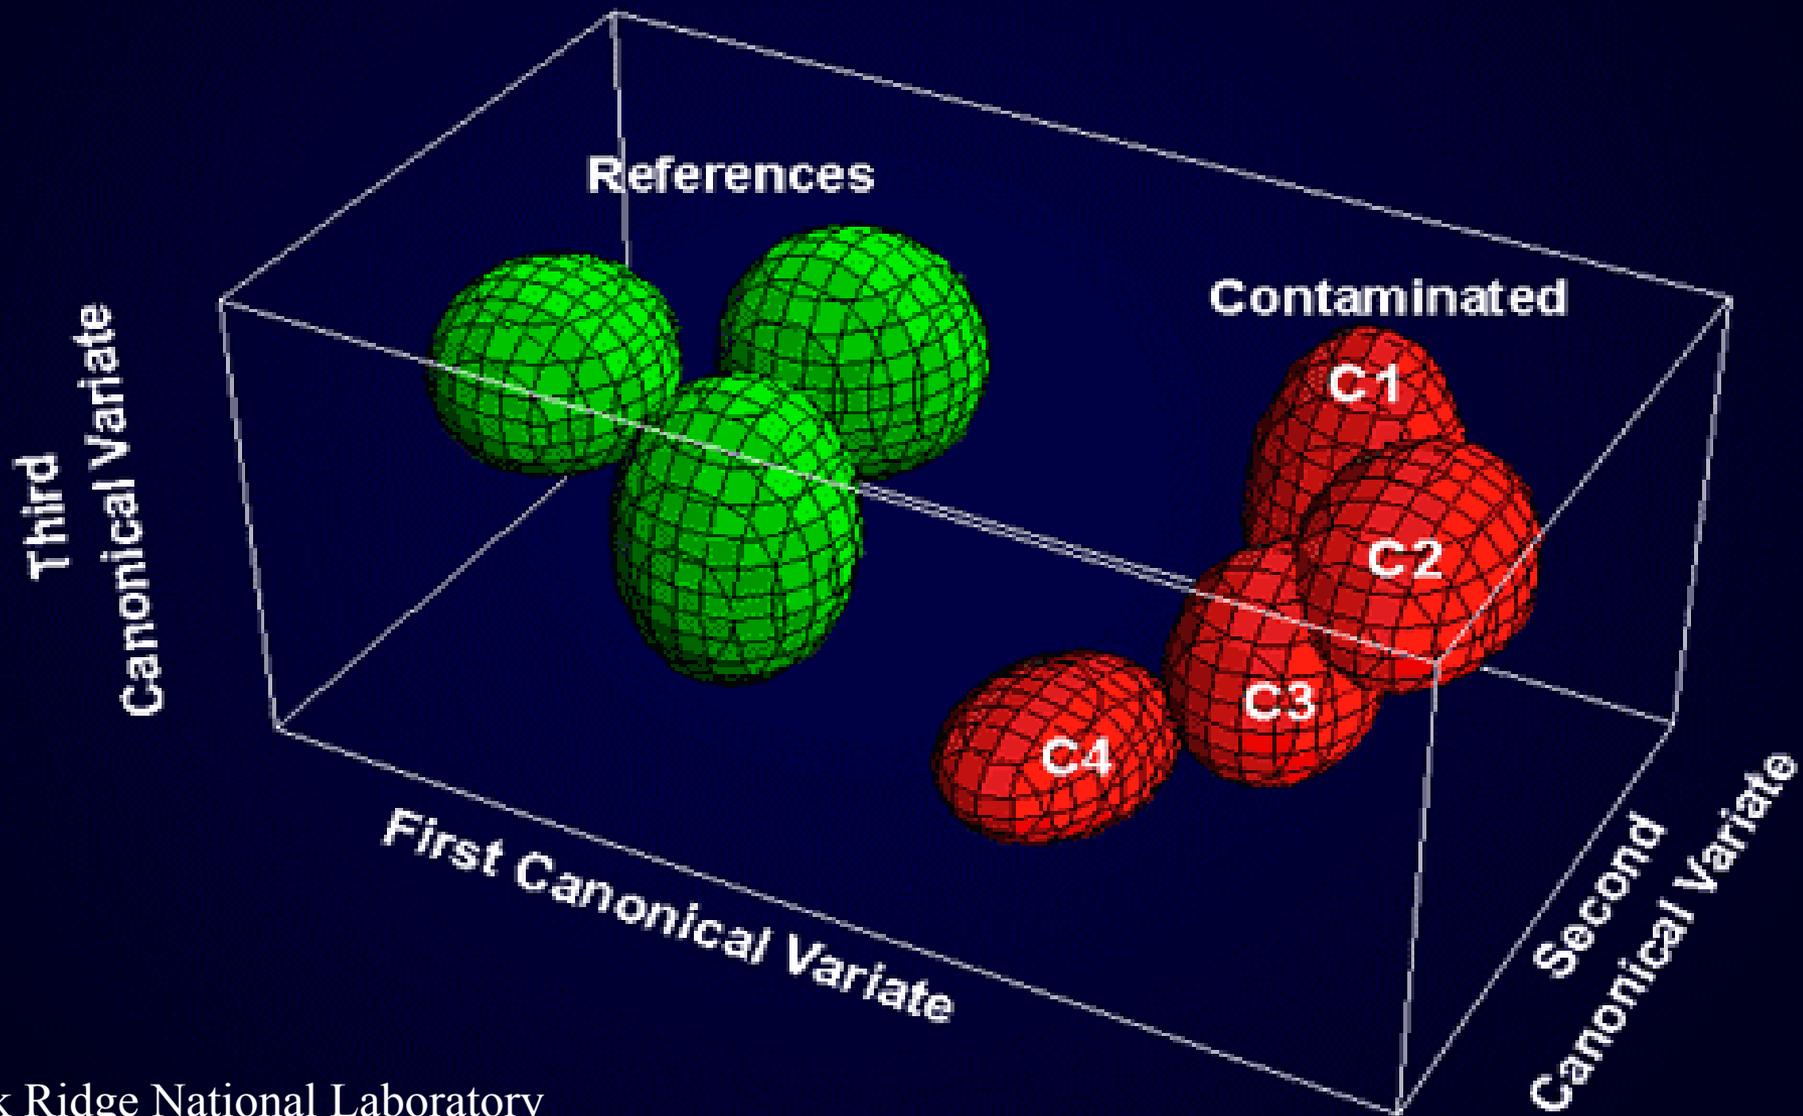

Population Response

ORNL 2002

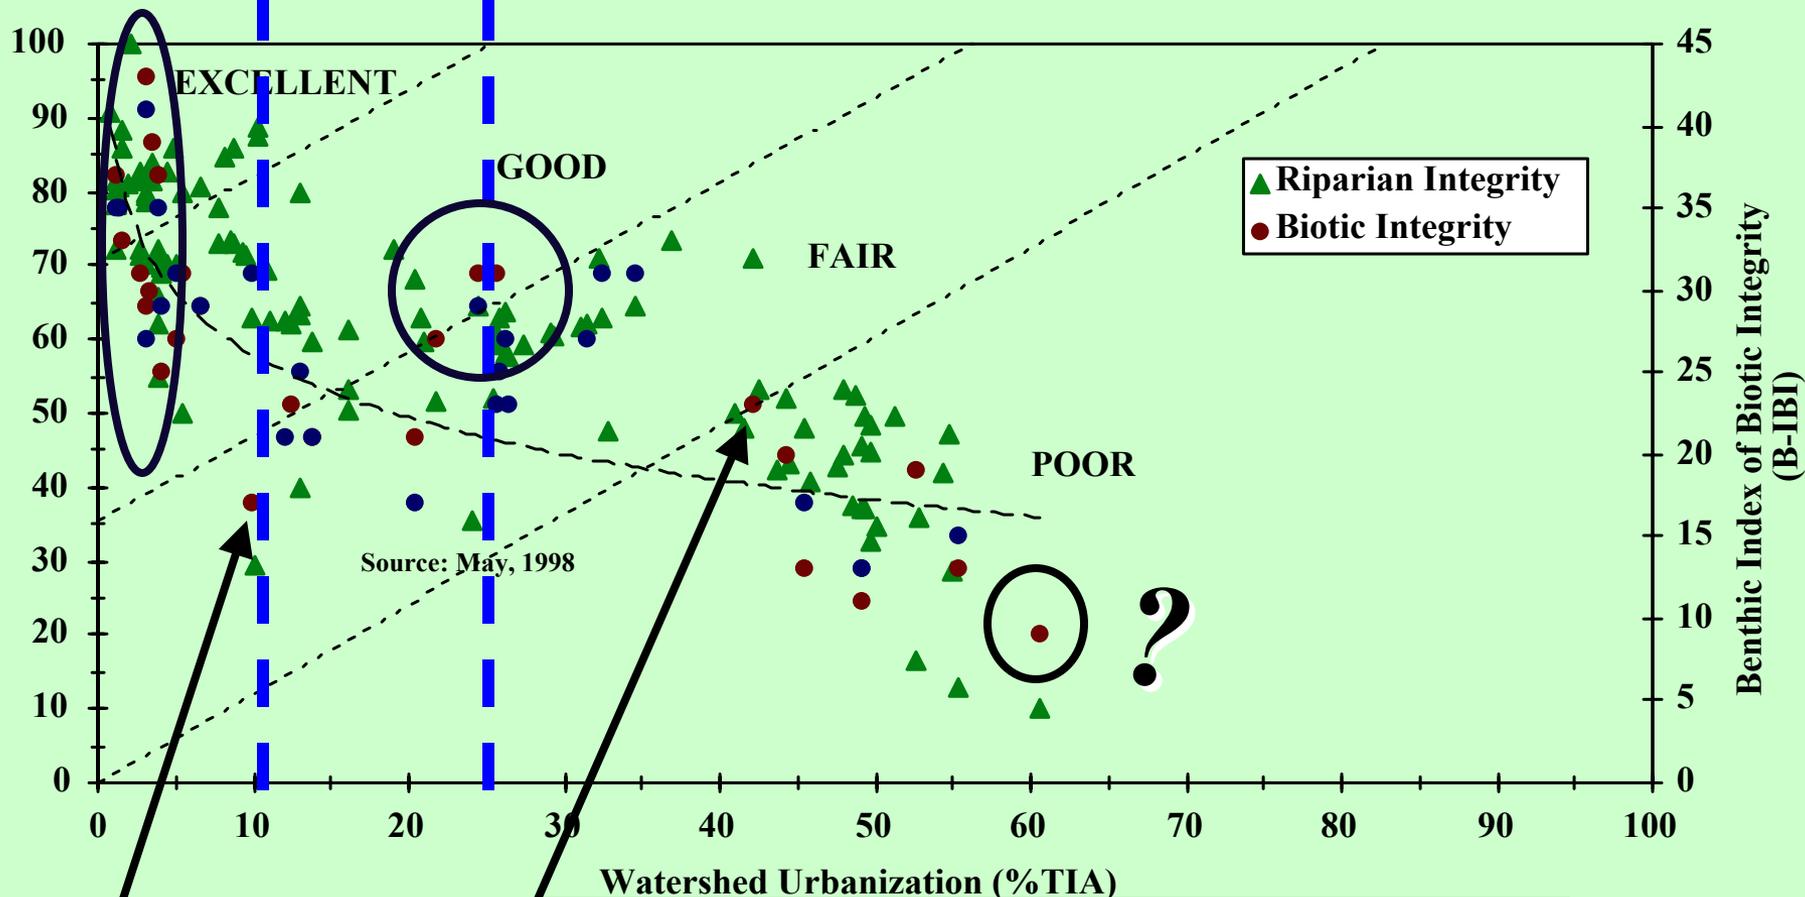

Environmental Management Ecological Risk Assessment

Integrated Bioindicator Site Responses in East Fork Poplar Creek

Relationship between basin development, riparian buffer width, and biological integrity in PSL stream

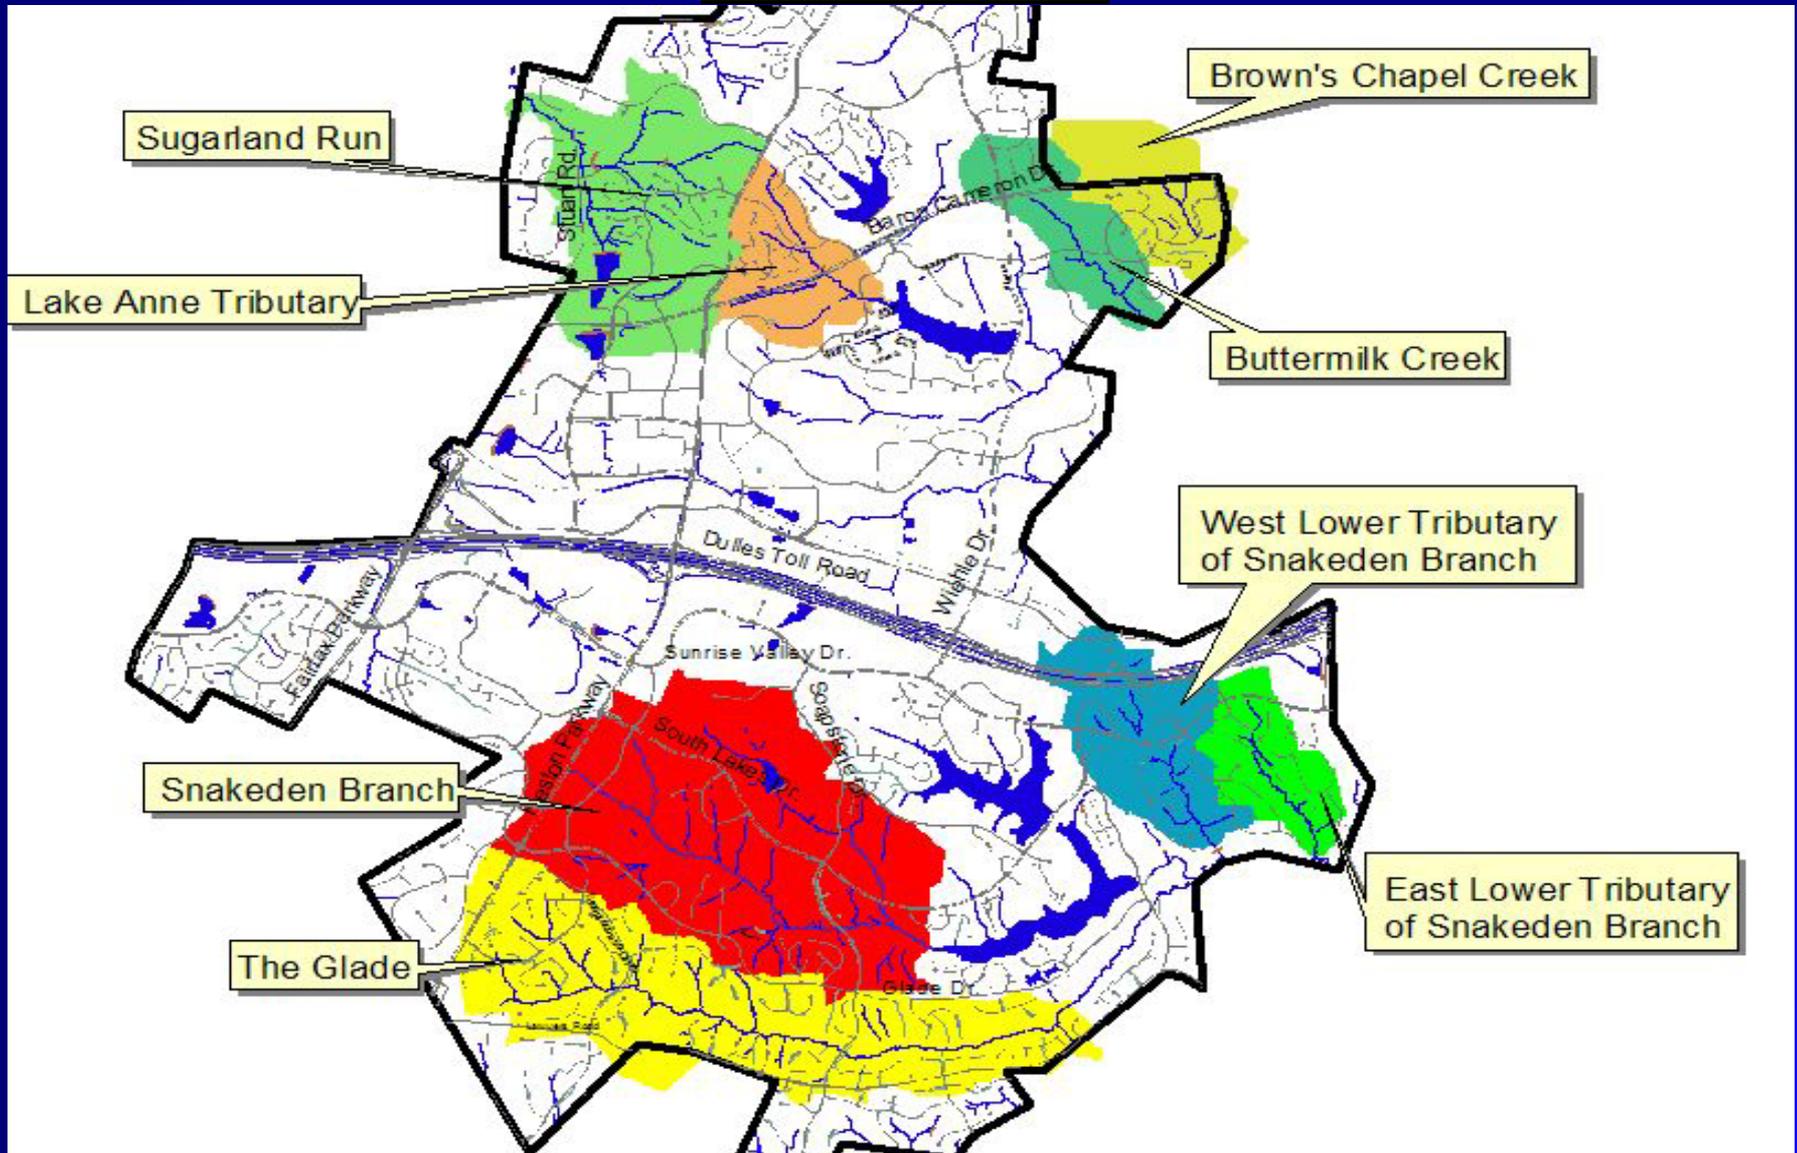

High Imperviousness (40%) Fair Integrity

Low Imperviousness 9% Fair Integrity

Ecologically

Dysfunctional

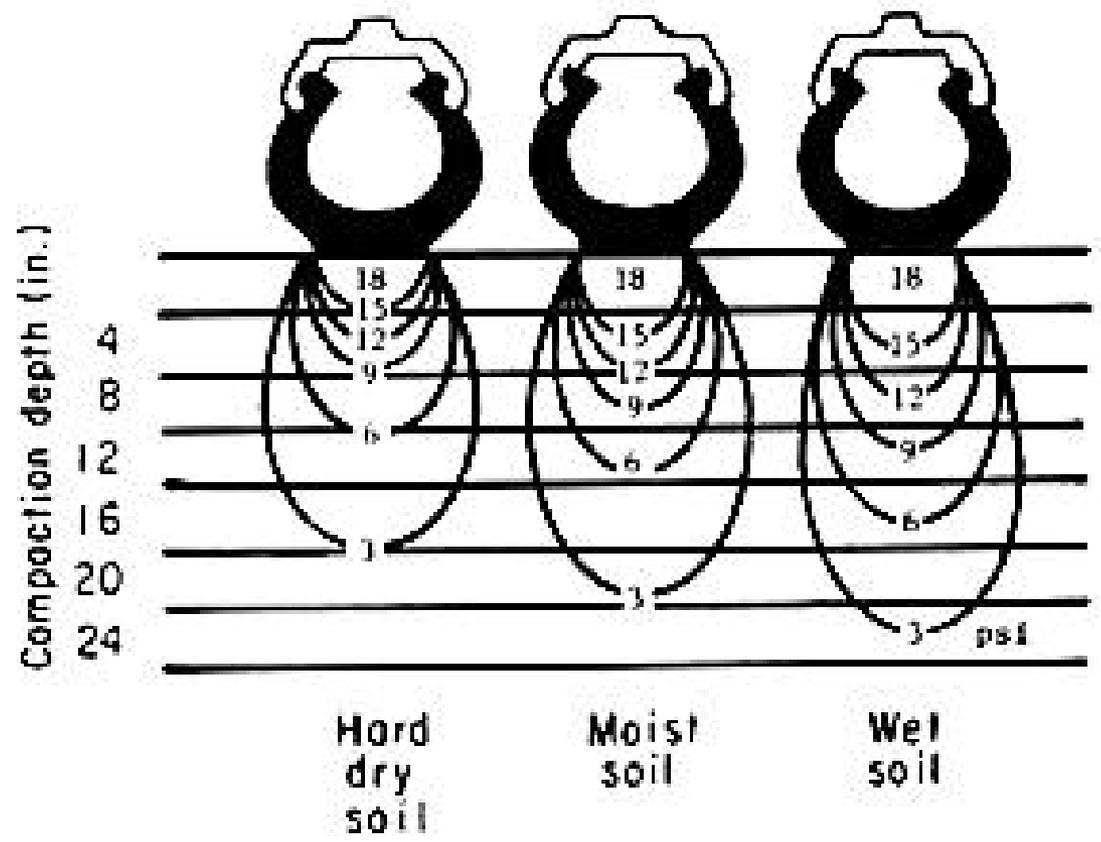

Figure 3. How soil moisture affects soil compaction. The lines in the soil under the tire represent curves of equal pressure. In all three situations the tire size was 11 x 28, the load was 1,650 pounds and the pressure 12 psi. On wet soil, pressures were transmitted to depths of more than 24 inches. (Source—Soehne, Jour. of Agr. Eng., May 1958.)

Background

Soil Ecosystem Functions

Physical / Chemical / Biological

1. *Hydrology*

storage / evaporation / recharge / detention

2. *Storing Cycling Nutrients (bacteria / fungi)*

phosphorous / nitrogen / carbon

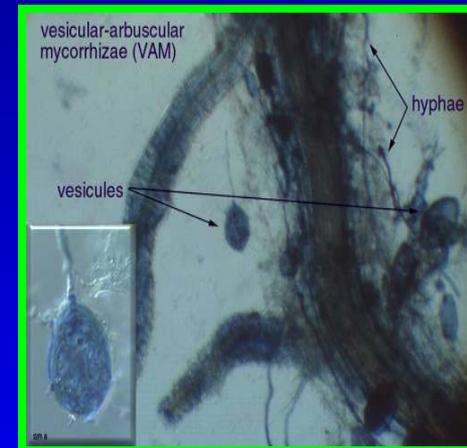

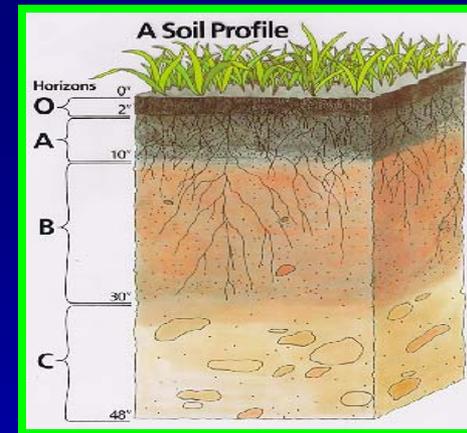

3. *Plant Productivity (vigor)*

4. *Water Quality*

filter / buffer / degrade / immobilize

detoxify organic and inorganic materials

Hydro-illogical

Cumulative Impacts

LID Basics

Principles and Practices

It's not what but how you do it!

- Hydrologically Functional Designs
- Increasing Assimilative Capacity
- Multifunctional / Beneficial Landscape and Architecture

**LID Provides Powerful New tools for
Urban Stormwater Management**

How Does LID Maintain or Restore The Hydrologic Regime?

- **Creative ways to:**
 - **Maintain / Restore Storage Volume**
 - interception, depression, channel
 - **Maintain / Restore Infiltration Volume**
 - **Maintain / Restore Evaporation Volume**
 - **Maintain / Restore Runoff Volume**
 - **Maintain Flow Paths**
- **Engineer a site to mimic the natural water cycle functions / relationships**

Key LID Principles

“Volume”

“Hydrology as the Organizing Principle ”

- Unique Watershed Design
 - Match Initial Abstraction Volume
 - Mimic Water Balance
- Uniform Distribution of Small-scale Controls
- Cumulative Impacts of Multiple Systems
 - filter / detain / retain / use / recharge / evaporate
- Decentralized / Disconnection
- Multifunctional Multipurpose Landscaping & Architecture
- Prevention

Defining LID Technology

Major Components

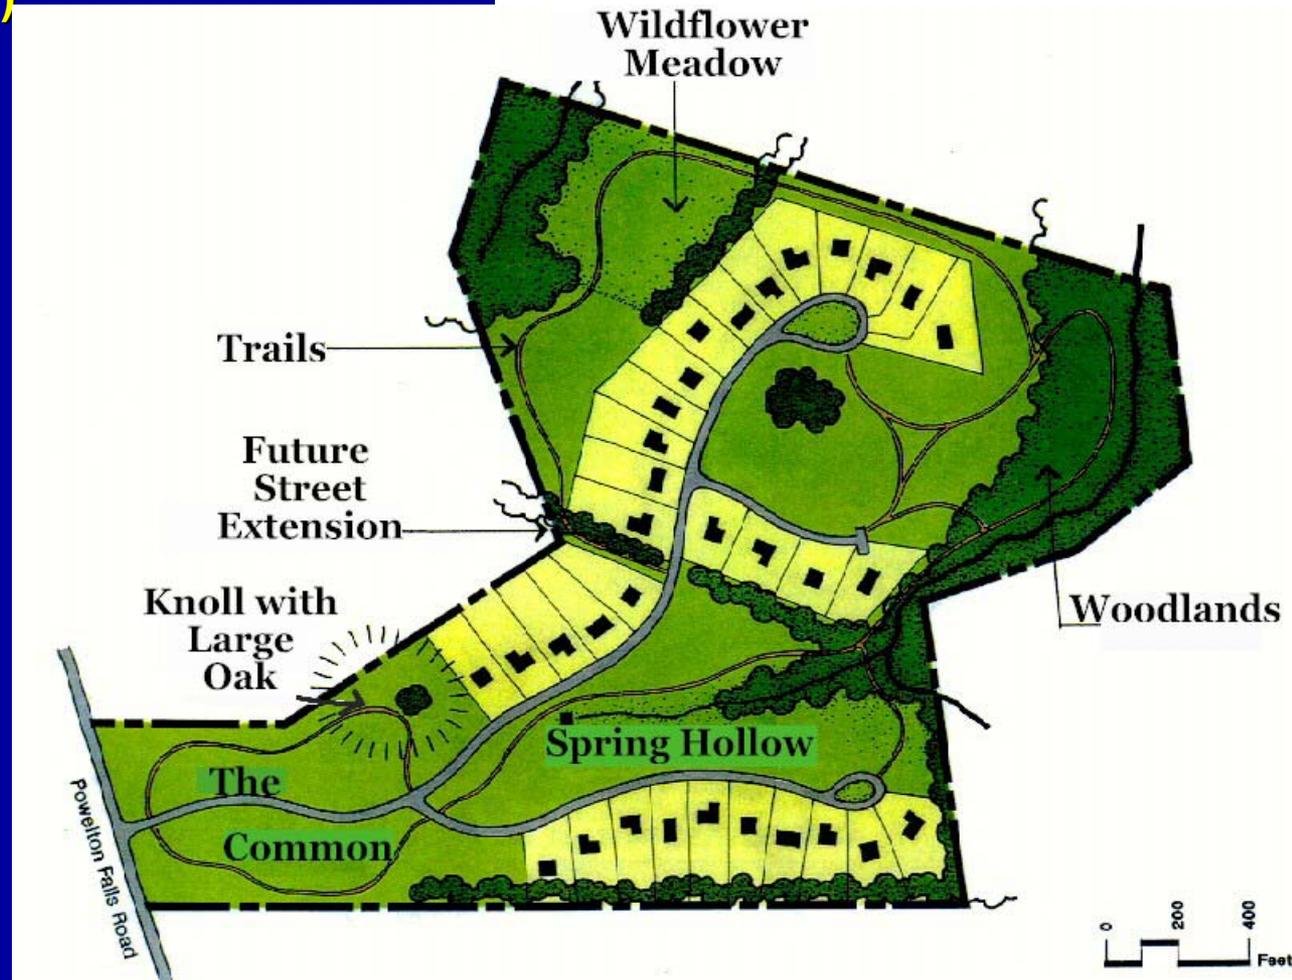

1. Conservation (Watershed and Site Level)
2. Minimization (Site Level)
3. Strategic Timing (Watershed and Site Level)
4. Integrated Management Practices (Site Level)
Retain / Detain / Filter / Recharge / Use
5. Pollution Prevention
Traditional Approaches

1. Conservation Plans / Regulations

- Local Watershed and Conservation Plans

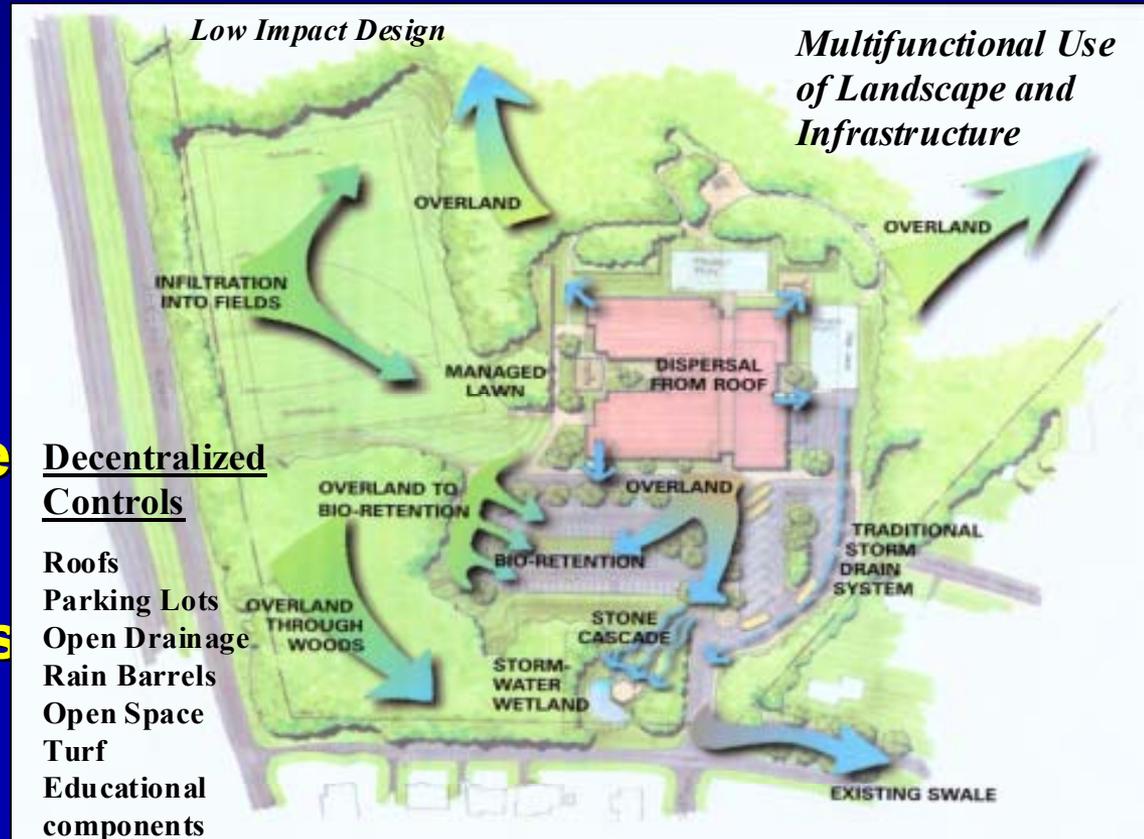

- Forest (Contiguous and Interior Habitat)
- Streams (Corridors)
- Wetlands
- Habitats
- Step Slopes
- Buffers
- Critical Areas
- Parks
- Scenic Areas
- Trails
- Shorelines
- Difficult Soils
- Ag Lands
- Minerals

Large and Small Scale

2. Minimize Impacts

- Minimize clearing
- Minimize grading
- Save A and B soils
- Limit lot disturbance
- * Soil Amendments
- Alternative Surfaces
- Reforestation
- Disconnect
- Reduce pipes, curb and gutters
- Reduce impervious surfaces

3. Maintain Time of Concentration

- Open Drainage
- Use green space
- Flatten slopes
- Disperse drainage
- Lengthen flow paths
- Save headwater areas
- Vegetative swales
- Maintain natural flow paths
- Increase distance from streams
- Maximize sheet flow

4. Storage, Detention & Filtration

“LID IMP’s”

- Uniform Distribution at the Source
 - Open drainage swales
 - Rain Gardens / Bioretention
 - Smaller pipes and culverts
 - Small inlets
 - Depression storage
 - Infiltration
 - Rooftop storage
 - Pipe storage
 - Street storage
 - Rain Water Use
 - Soil Management**

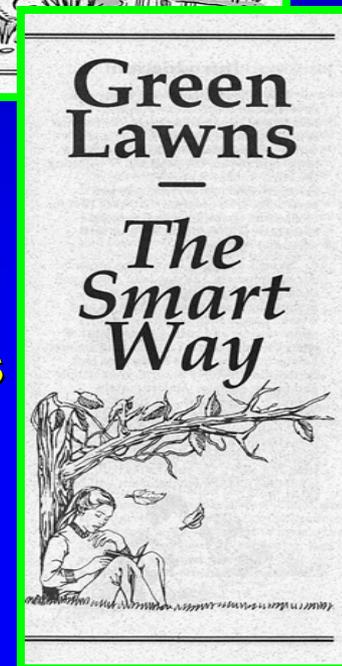

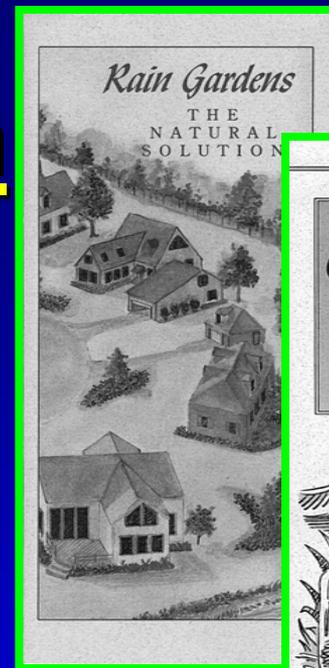

5. Pollution Prevention

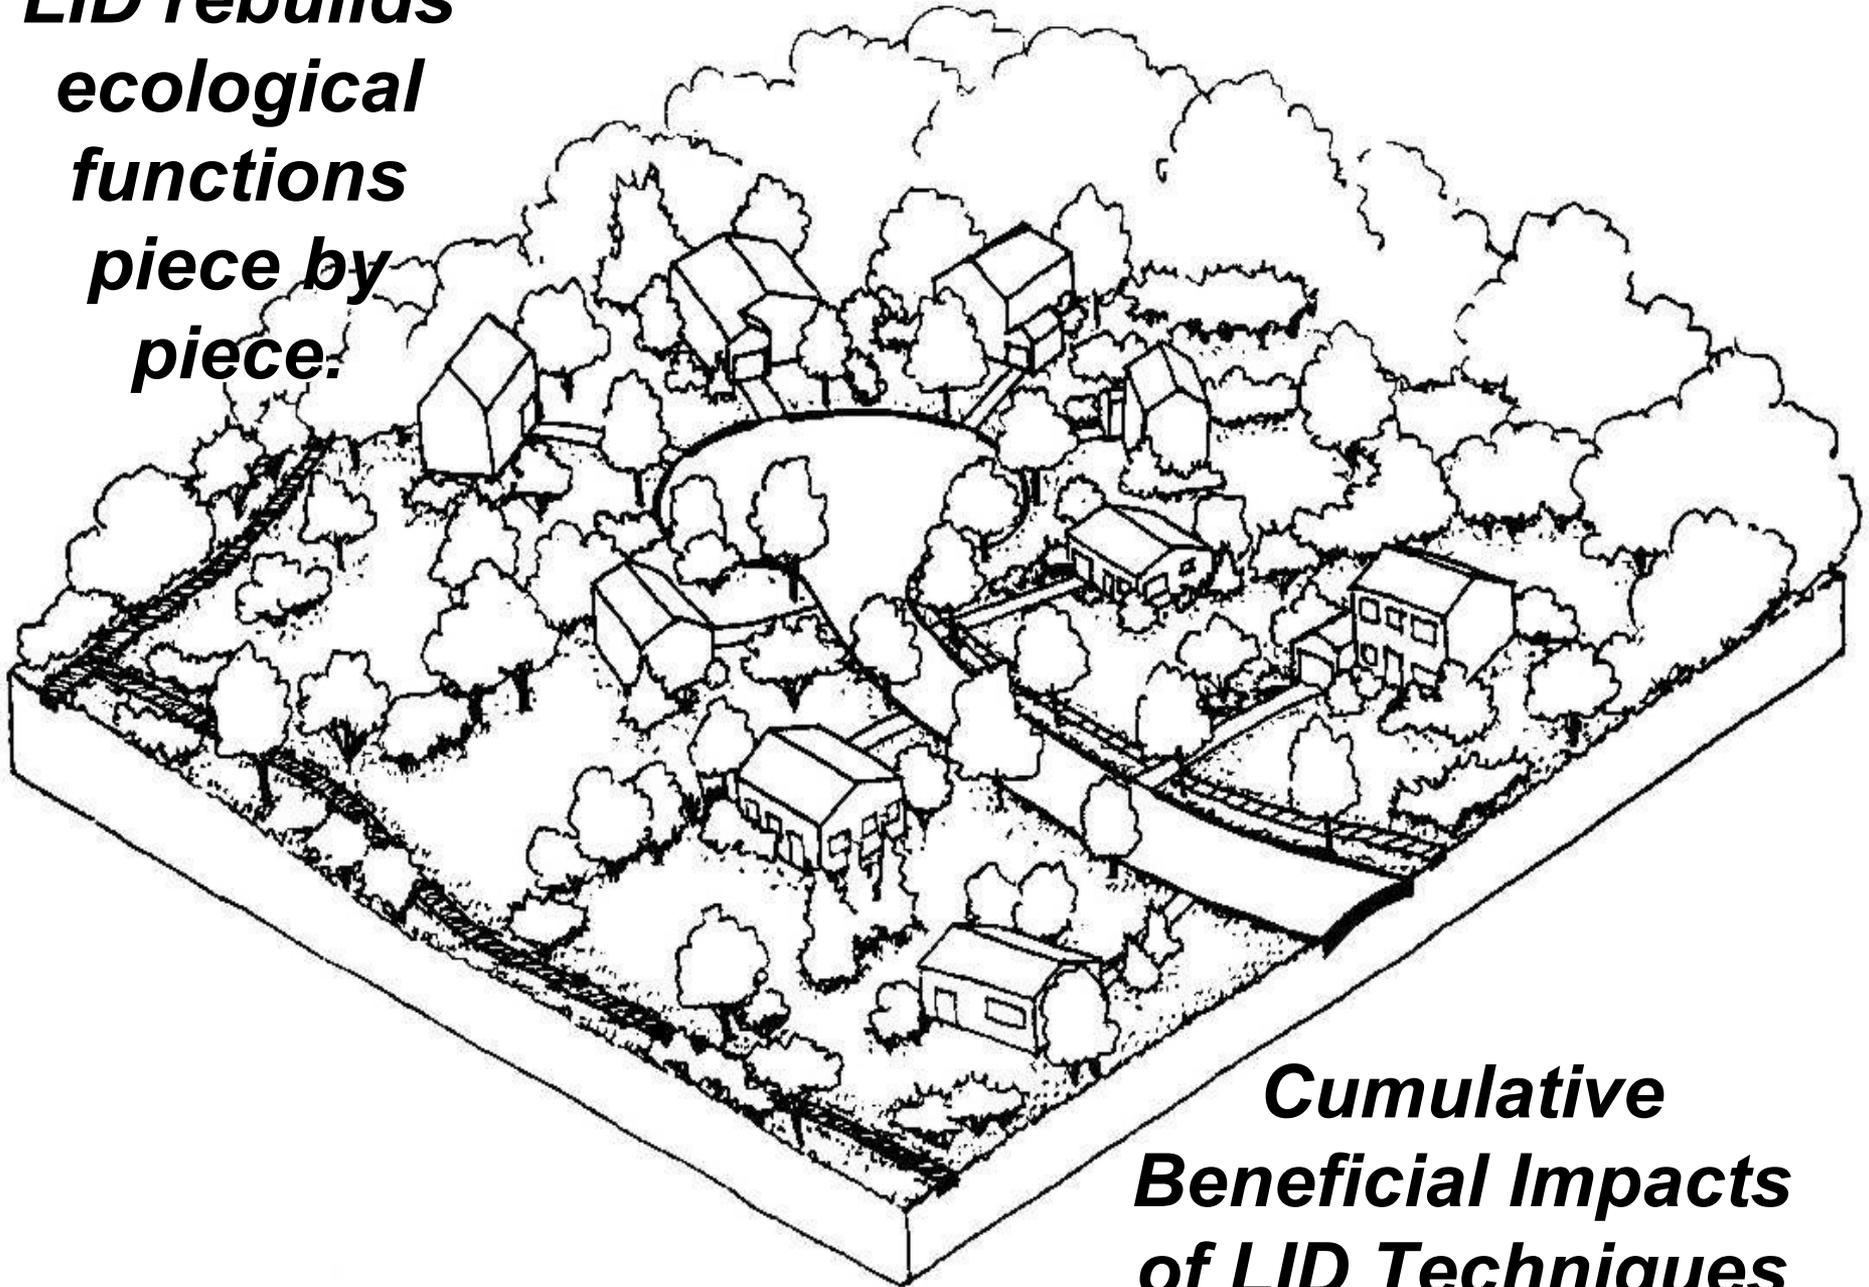

30 - 40% Reduction in N&P

Kettering Demonstration Project

- Maintenance
- Proper use, handling and disposal
 - Individuals
 - Lawn / car / hazardous wastes / reporting / recycling
 - Industry
 - Good house keeping / proper disposal / reuse / spills
 - Business
 - Alternative products / Product liability

Kettering

Community Demonstration Project

Eugene T. Lauer
Director

Kettering

Community Demonstration Project

Would you like to have great landscaping that attracts wildlife with less time, less money, and less harmful chemicals?

Come out to our Wild Acres workshop to learn how!

Date: Monday, October 21
Time: 7:00pm

Place: The Kettering Community Center

Each person that attends will receive a free copy of the Wild Acres manual.
For more information call Stephen Pa...
An interpreter for the hearing impaired can be made available.

Parris N. Glendening
County Executive

Working Together
Cleaner, Healthier Community

Parris N. Glendening
County Executive

Working Together For A
Cleaner, Healthier Community

Did You Know:

Kettering residents discharge approximately 1,277 quarts of detergents each year to the local stream from car washing alone?

Approximately 2,533 quarts of oil are disposed of improperly in Kettering each year and have the potential to contaminate the stream?

Approximately 2,992 quarts of antifreeze are drained onto the streets of Kettering where it then runs directly into the stream?

Approximately 23,643 pounds of nitrogen have the potential of being washed off of Kettering lawns each year from fertilizer applications?

Approximately 80% of Kettering residents apply some form of chemical pesticides to their yards each year?

When our environmental education program began last summer, 58% of Kettering residents did not know that neighborhoods like Kettering cause water pollution?

The stream that flows through the eastern part of Kettering into the Northeast Branch is so polluted that it can support almost no aquatic life?

What is Bioretention?

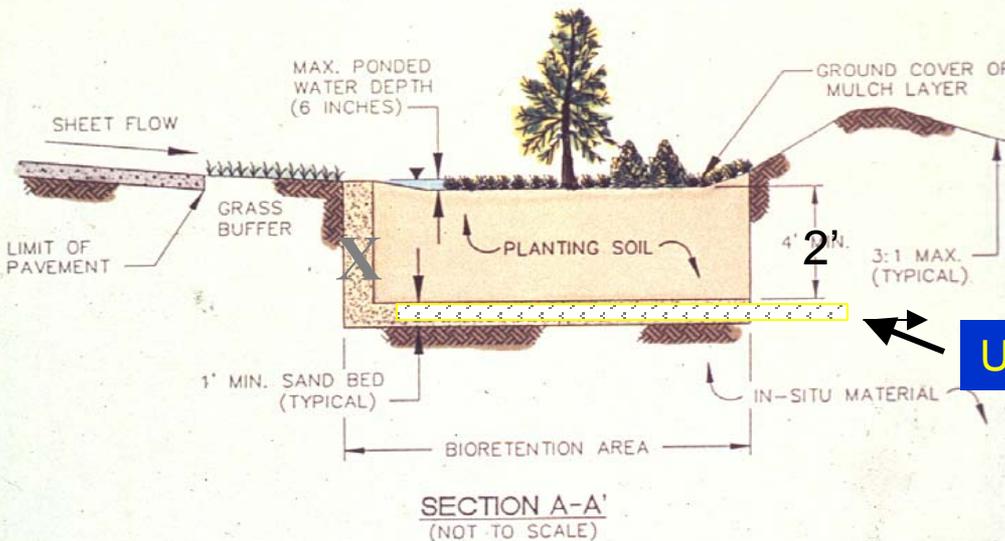

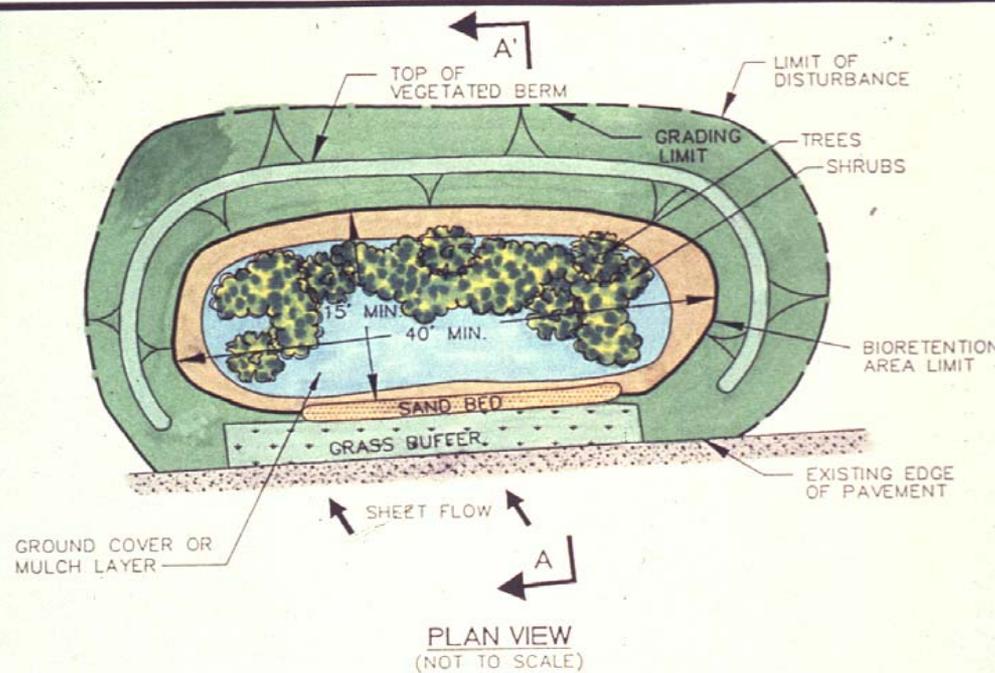

“Filtering stormwater runoff through a terrestrial aerobic (upland) plant / soil / microbe complex to remove pollutants through a variety of physical, chemical and biological processes.”

The word “bioretention” was derived from the fact that the biomass of the plant / microbe (flora and fauna) complex retains or uptakes many of the pollutants of concern such as N, P and heavy metals.

It is the optimization and combination of bioretention, biodegradation, physical and chemical that makes this system the most efficient of all BMP's

Bioretention

- Shallow Ponding - 4" to 6"
- Soil Depth 2' - 2.5'
- Sandy Top Soil
 - 65% Sand
 - 20% Sandy Loam
 - 15% Compost
- Under Drain System
- Plant Selection

Possibilities &
Opportunities

Imperatives:

- Sustain economic growth
- Maximize private profit
- Expand markets
- Externalize costs

Imperatives:

- Increase local self-reliance
- Satisfy basic human needs
- Guarantee participation and accountability
- Use appropriate technology

Imperatives:

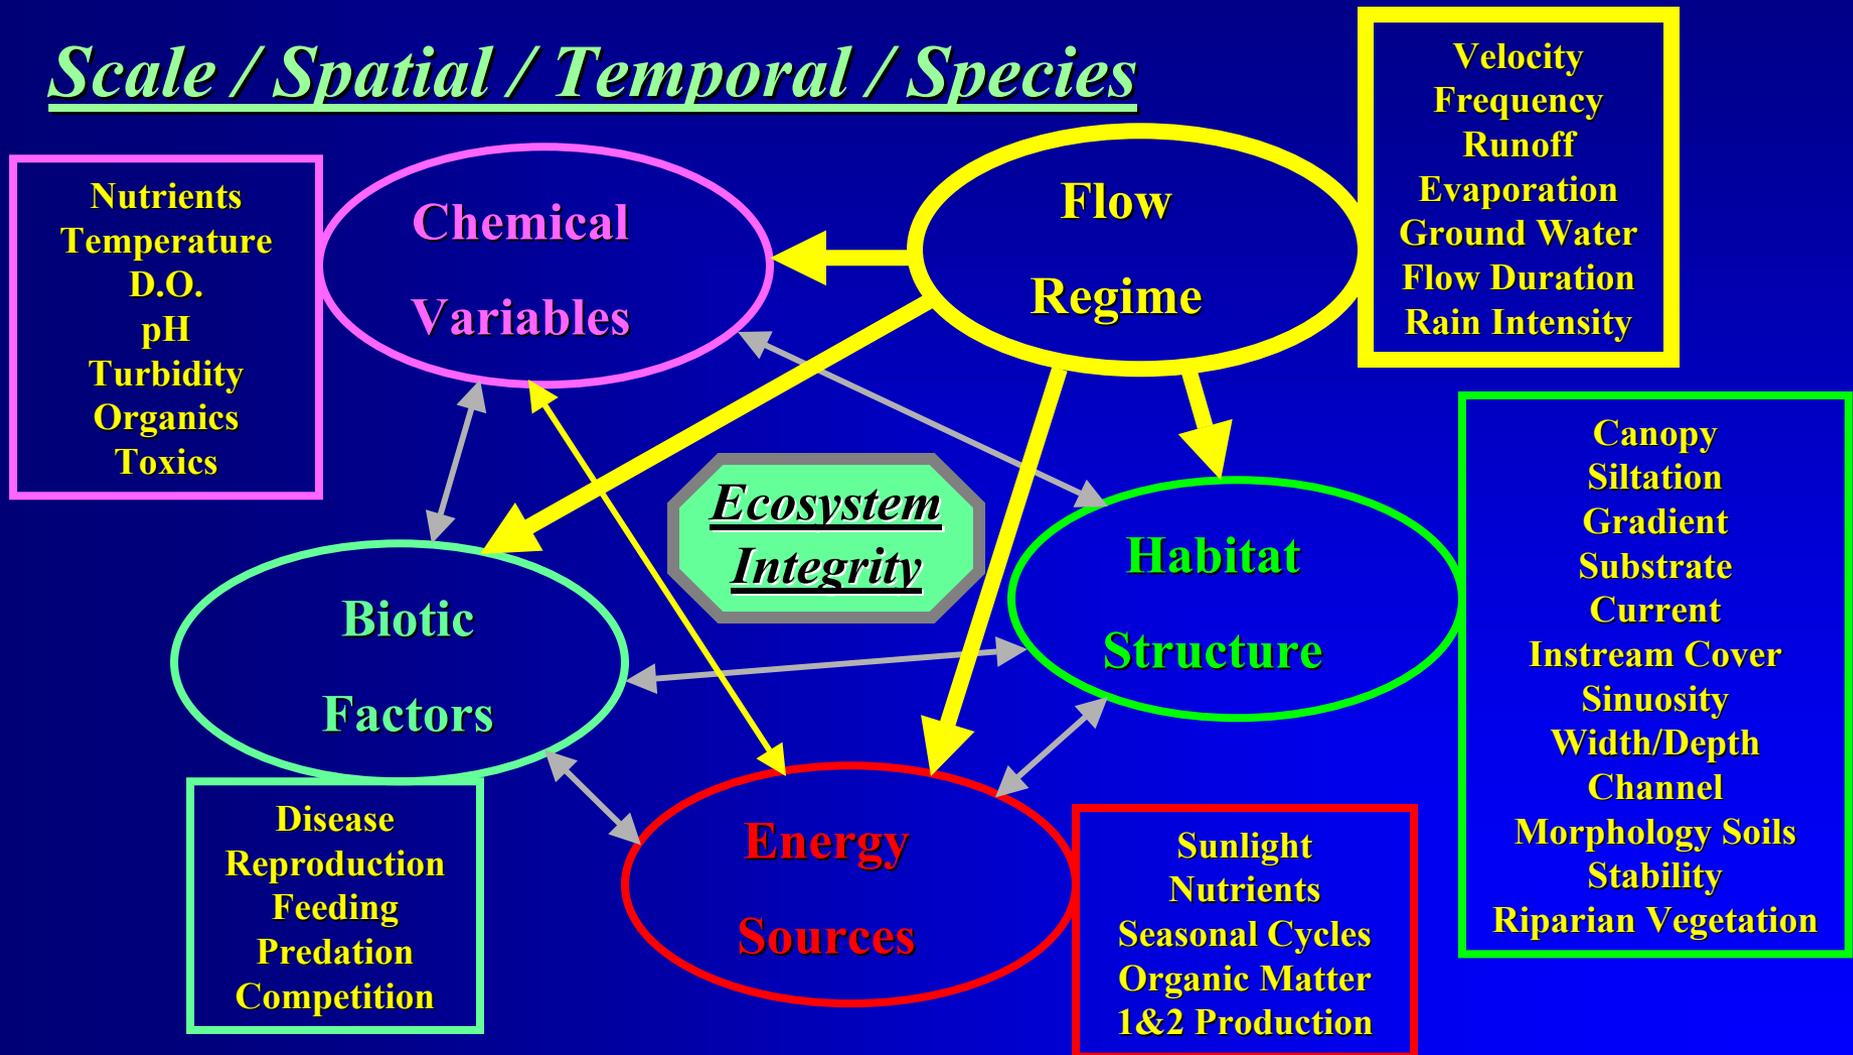

- Respect carrying capacity
- Conserve and recycle resources
- Reduce waste
